

Division: Game to practice division

Division Racetrack

As well as the board you will need two counters and a 1-6 die.

You can print the board below or make your own – or work with the child to make a board. The simplest rules are that you play the child, each of you having a counter. Each player in turn rolls a 1-6 die and moves that number of squares. You have to answer the question on the square you land on (or if it gives instructions, follow them and if appropriate answer the question on the new square). The winner is the first player to reach ‘finish’.

The game can be adapted for adding, subtracting, or multiplying.
